The Fallen data visualization is not your typical 2D infographic. It shows the data visualization through animation and some interaction. Each "dot" is a silhouette representing a human death toll of 1,000 or 100,000 (can't remember the exact number). The data shows military casualties only deaths non injuries casualties. Also adding civilian deaths as well. The data breaks it down into events and also compares to different stats. One thing I wished it had was a legend. Kind of hard to keep track of which color represents what country. The main objective of the data visualization achieves its goal. I think it breaks the mind showing how devastating a global modern conflict has on the world. You can see the number 70,000,000 written and you know it's a big number but the data visualization delivers how big that number really is.
